

# WHAT DO YOU MAKE? MANUFACTURERS?

In my career with Manufacturing Asset Solutions, I have had the benefit and pleasure of supporting manufacturers across numerous industries in their efforts toward uptime and continuous improvement.

The same question is often put to me from various sectors of manufacturing: “Bobbi - what does your company know about making aluminum, rubber, glass, paper, flour, dairy, wine, cannabis extracts or even energy?”

My answer is always the same - “It doesn’t matter what you’re making over there...”

“We’re not here to tell you HOW to MAKE what you MAKE, we’re here to help you implement solutions that allow you to be successful in making it - and - systematize processes to optimize uptime, production goals, quality control and continuous improvement.”

In most manufacturing facilities, the focus is on PRODUCTION. In the manufacturing industry, it’s no secret that Maintenance is chronically overlooked, undervalued and underfunded - especially when the maintenance model is a Reactive one.

## It doesn't matter WHAT YOU MAKE...

### We can help

Food &  
Dairy Industry

Chemical  
Sector

Aerospace  
Equipment

Automotive  
Industry

Aluminum  
Facilities

Plastics  
Manufacturing

Oil & Gas  
Industry

Paper &  
Wood Industry

*“We’re here to help you implement solutions that allow you to be successful in your production, regardless of what you’re making.”*

When your most critical assets experience unplanned downtime; chaos mounts, production goals aren’t met, moral suffers and compliance standards go by the wayside.

The manufacturing focus must shift toward efficiency, optimization and process solutions using tools like **Maintenance Management Software (CMMS | Asset Management)**, **Preventive and Predictive Maintenance (PM and PdM)**, **Condition Monitoring and Data Driven Insights**.

When Maintenance is streamlined, Production increases and the resulting data drives accountability and continuous improvement, demonstrating return on investment.

With custom reporting and the appropriate documentation at the tips of your fingers, you can walk into Compliance Audits (ISO-9000) with confidence.

We know that American Manufacturing is on the rise and advances in technology backed by the IIoT (Industrial Internet of Things) are leading the way toward SMART Plants, Reliability and the Automation of Processes (AoP) from Scheduled Maintenance to Inventory Management to Robotics and much more.

**When you are ready to run your facility at Industry 4.0 Standards, we will be here...**
